

Where's My Data?

Finding a spatial location or data on disk

GPS

The Units

- In class, we will install batteries and check out the system.
- I have a short video on our GPS units.
- We will experiment with setting the units to lat-long and UTM.
- Then we will gather 5 data points around the central UD plaza.

The Collected Data

Using your sample locations

- After gathering your data points, we will first plot them with USAPhotoMaps.
- Click on Go To -> lat-long
- Enter your data, either as lat-long or UTM.
- In the resulting box, label the comment with the closest feature.
- Once completed, use *print screen* to capture the screen. Then paste it into Powerpoint.

ArcCatalog

- After completing the USAPhotoMaps assignment, transfer the files for Chapter 4 to your Y: drive.
- Complete the tutorial for Chapter 4.
